Milestone for Cleanfix: Handover of 100.000th reversible fan

01/2019

**Milestone for Cleanfix: Handover of 100.000th reversible fan**

More than 120,000 fans produced worldwide.

For an autumn day in Southwestern Ontario, the weather was warm and sunny. But with rain looming that evening, the brothers Richard and James Armitage would normally have absolutely zero reason to take a break from their busy custom cutting and mowing operations. But, then again, it's not every day that the CEO of a global German-based manufacturer shows up at the Middlesex County farm they're working at.

Benjamin Hägele, CEO of worldwide reversing fans supplier Cleanfix, dropped by the Canadian farm to thank Richard and James for their ongoing use of Cleanfix fans – including a new unit bearing Cleanfix serial #100,000! The milestone engine-cooling fan is equipped in a Case Optum 270 tractor recently acquired by the Armitage brothers.

Beyond the handshakes and best wishes, such an opportunity to visit end-users is one Hägele relishes. "It's always the most important thing to me to get the real feedback from the field," he says. "That's also why we keep the aftermarket business. We need that feedback from the field to fully know and understand what we need to do to continually improve as a solutions provider."

What he heard from the Armitage brothers is that the reversing fan in their new Optum 270 is operating well at an admittedly accelerated activation of every 5 minutes. "It's not really the dust here that demands the additional reversible fan use," James Armitage explained to Hägele. "It's more that, when we're cutting, a little bit of sap or sugars that come off the hay. We need to keep that substance out of the machine as best we can."

About Cleanfix Fans

With headquarters in Germany, Cleanfix is revolutionizing engine-cooling systems around the world. The company's multi-patented reversing fan solutions clean radiators, contribute to optimal cooling and extend the lives of machines in high-dust environments. Cleanfix fans enable less machine downtime, significant fuel savings and increased efficiency.

Cleanfix fans are used in a wide range of construction, municipal, agricultural, forestry, waste and recycling machines, including tractors, harvesters, combines, sprayers, excavators, wheel loaders, dozers and a range of industrial equipment.

Cleanfix (www.cleanfix.org) has three global engineering and manufacturing sites, and serves customers in more than 25 countries.
